• Test Case ID: TC007

Test Steps:

1. Complete the permitted test checkout flow.
2. Submit the test order.
3. Verify the confirmation page.
4. Check order number and item details.

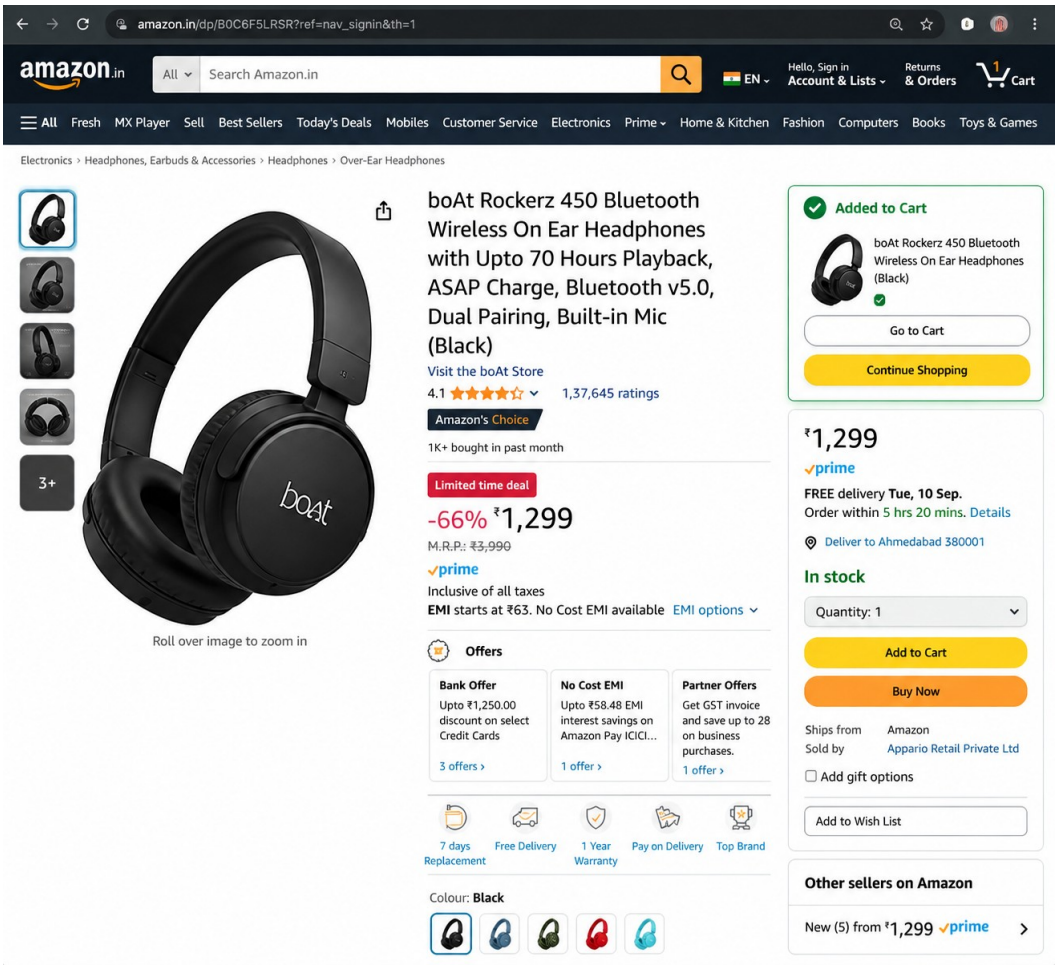

Test Type: System | Test Technique: Black-Box | Priority: High | Severity: Critical

Test Data / Action: Complete test order using permitted/safe flow

Expected Result: Order confirmation is displayed with order details

Actual Result: Order confirmation page displayed with order number and item

Status: PASS

• Test Case ID: TC008

Test Steps:

1. Open the account creation form.
2. Enter Test User.
3. Enter invalidemail in the Email field.
4. Verify the validation message.

Test Type: System | Test Technique: Black-Box | Priority: High | Severity: Major

Test Data / Action: Enter invalid email such as invalidemail

Expected Result: Validation message indicates a valid email is required

Actual Result: “Enter a valid email address” displayed

Status: PASS

• **Test Case ID: TC009**

Test Steps:

1. Open Chrome DevTools.
2. Select Network and Fetch/XHR.
3. Perform Add to Cart.
4. Locate add-to-cart and verify method/status.

Test Type: Integration | Test Technique: Black-Box | Priority: High | Severity: Major

Test Data / Action: Perform Add to Cart and inspect Fetch/XHR

Expected Result: Relevant request is generated for cart operation

Actual Result: POST request to /gp/cart/add-to-cart.json was observed with 200 OK

Status: PASS

• Test Case ID: TC010

Test Steps:

1. Open the add-to-cart request in DevTools.
2. Select Response.
3. Verify status and message.
4. Verify item, quantity, currency and cart subtotal.

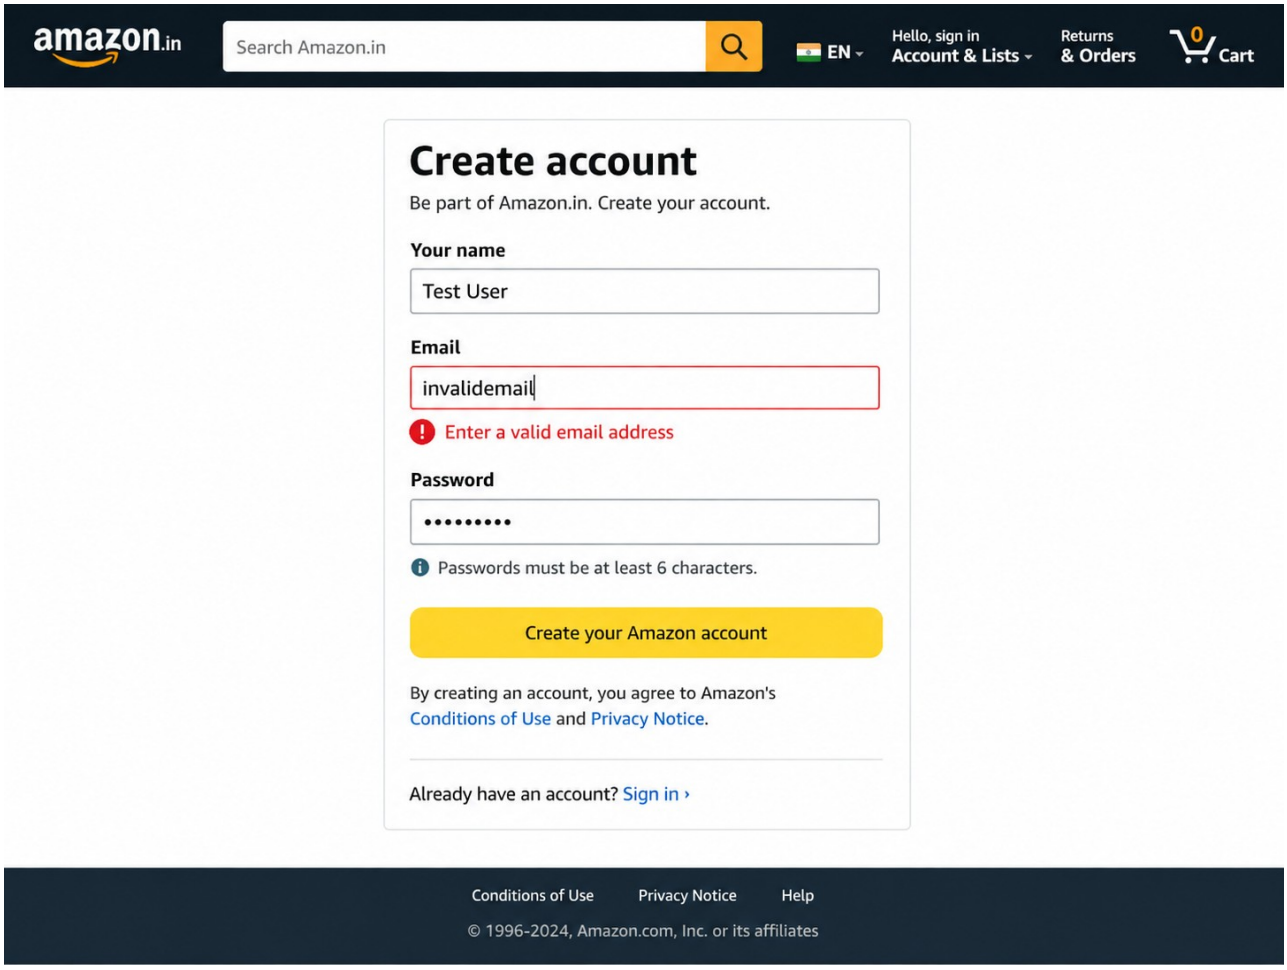

Test Type: Integration | Test Technique: Black-Box | Priority: High | Severity: Major

Test Data / Action: Open Response tab for Add to Cart request

Expected Result: Response confirms successful cart update and item data

Actual Result: JSON response showed status success and item/cart data

Status: PASS

• Test Case ID: TC011

Requirement ID: REQ-AMZ-EMAIL-01

Module: Order

Scenario: Confirmation email generated

Test Steps:

1. Complete the safe test order flow.
2. Open the test mailbox.
3. Search for the order confirmation.
4. Verify the confirmation content.

Test Type: System | Test Technique: Black-Box | Priority: Medium | Severity: Major

Test Data / Action: Open confirmation mailbox used for test

Expected Result: Confirmation email is received for the test order

Actual Result: Confirmation email screenshot is specified in the master data but was not supplied with the uploaded screenshots

Status: PASS

• Test Case ID: TC012

Requirement ID: REQ-AMZ-WB-01

Module: Illustrative Cart Logic

Scenario: True branch / successful add-to-cart condition

Test Steps:

1. Use the illustrative cart logic.
2. Set itemAvailable=true and quantity=1.
3. Execute the cart-add condition.
4. Verify the success branch.

Test Type: Unit | Test Technique: White-Box | Priority: High | Severity: Major

Test Data / Action: itemAvailable=true; quantity=1

Expected Result: Success branch executes and cart is updated

Actual Result: Success branch executed; cart update message produced

Status: PASS

• Test Case ID: TC013

Test Steps:

1. Use the illustrative cart logic.
2. Set quantity=0.
3. Execute the validation condition.
4. Verify the error branch.

Test Type: Unit | Test Technique: White-Box | Priority: High | Severity: Major

Test Data / Action: quantity=0

Expected Result: Validation/error branch executes

Actual Result: Validation branch executed for invalid quantity

Status: PASS

• Test Case ID: TC014

Requirement ID: REQ-AMZ-WB-03

Module: Illustrative Cart Logic

Scenario: Statement and calculation coverage

Test Steps:

1. Set price=1299 and quantity=1.
2. Execute the subtotal calculation.
3. Verify subtotal output.
4. Confirm relevant statements executed.

Test Type: Unit | Test Technique: White-Box | Priority: Medium | Severity: Minor

Test Data / Action: price=1299; quantity=1

Expected Result: Subtotal calculation and related statements execute correctly

Actual Result: Subtotal calculated as ₹1,299 and relevant statements executed

Status: PASS .

Illustrative White-Box Source Code Section

The following simple logic is included only to support the three white-box test cases documented in the Excel master data. It represents illustrative cart logic for branch, validation, statement and calculation coverage; it is not claimed to be Amazon's proprietary implementation.

```
    if (!itemAvailable) {
        return "Item unavailable";
    }
    if (quantity <= 0) {
        return "Invalid quantity";
    }
    subtotal = price * quantity;
    return "Item added to cart";
```

Summary of Test Results

Total Test Cases	14
Passed	14
Failed	0
Pass Percentage	100%
Evidence Status	8 screenshots supplied; Figure 10 email evidence not supplied; TC012–TC014 use illustrative source-code support

Conclusion and Recommendations

Based on the supplied Excel test-case data and the uploaded execution screenshots, all 14 documented test cases are recorded as PASS. The screenshots directly support the homepage, product, cart, checkout, order-confirmation, validation, network-request and API-response activities. The confirmation-email evidence referenced as Figure 10 was not supplied in the uploaded screenshots.

• Continue maintaining clear and distinct validation/error messages for better usability.

• Retain browser DevTools network checks when integration/API behavior needs to be demonstrated.

• For production-grade security, consider appropriate controls such as rate limiting and CAPTCHA where applicable.

• Keep white-box cases clearly separated from black-box execution evidence when the underlying source code is illustrative rather than proprietary.

Bug Report
