GitHub Login & Password Reset – BVA & EP Test Cases

Test Case ID: GH_BVA_EP_01

Webpage URL: https://www.instagram.com

GitHub homepage

• Scenario ID: TC-01

Scenario: EP – Valid Login

Test Steps:

1. Open GitHub login page.
2. Enter a valid account username/email.
3. Enter the correct password.
4. Click Sign in.

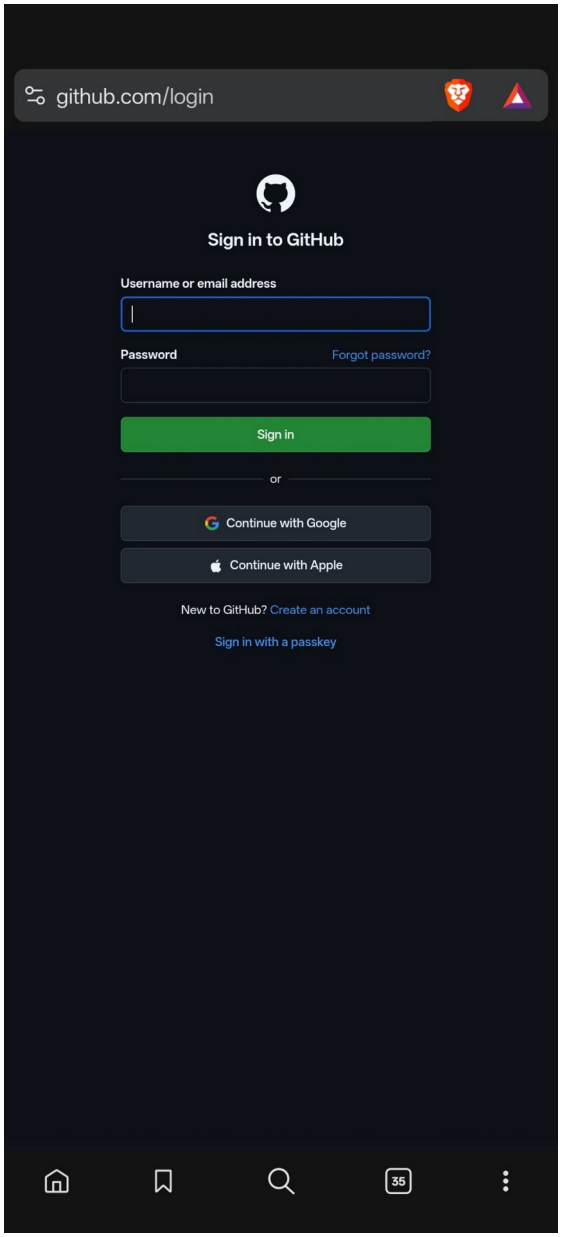

Test Input: Valid username/email + valid password

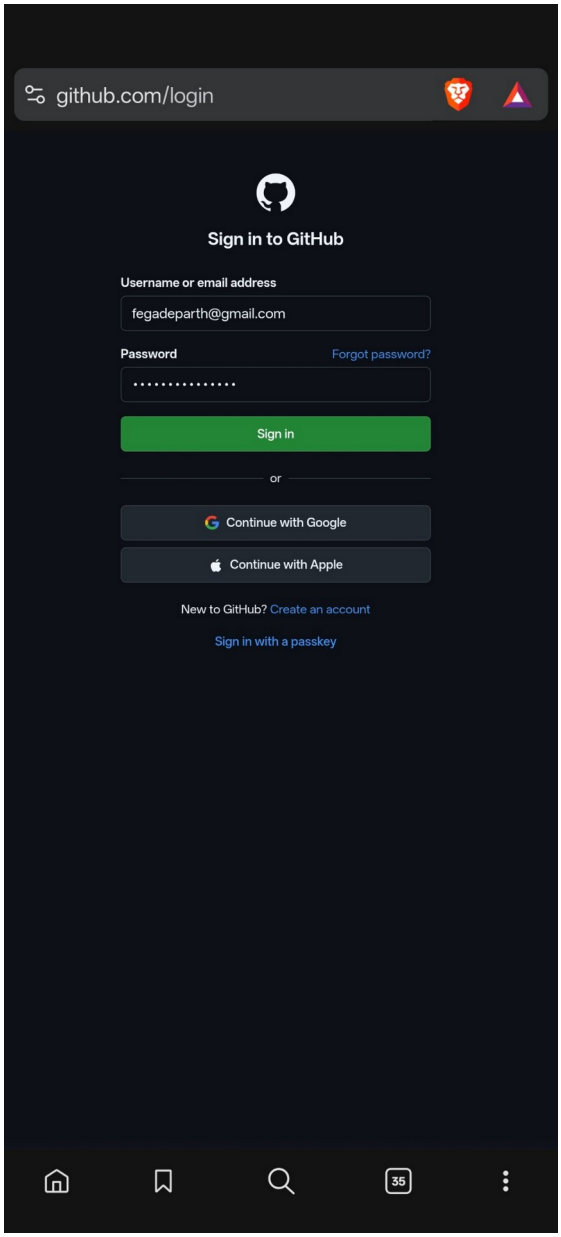

Expected Results: User should authenticate successfully and enter the account.

Actual Results: No successful-login destination is visible in the supplied evidence.

Status: Not Executed

Comments: Valid equivalence class; use only a test account/synthetic data.

• Scenario ID: TC-02

Scenario: EP – Invalid Login

Test Steps:

1. Open login page.
2. Enter an invalid username/email or incorrect password.
3. Click Sign in.

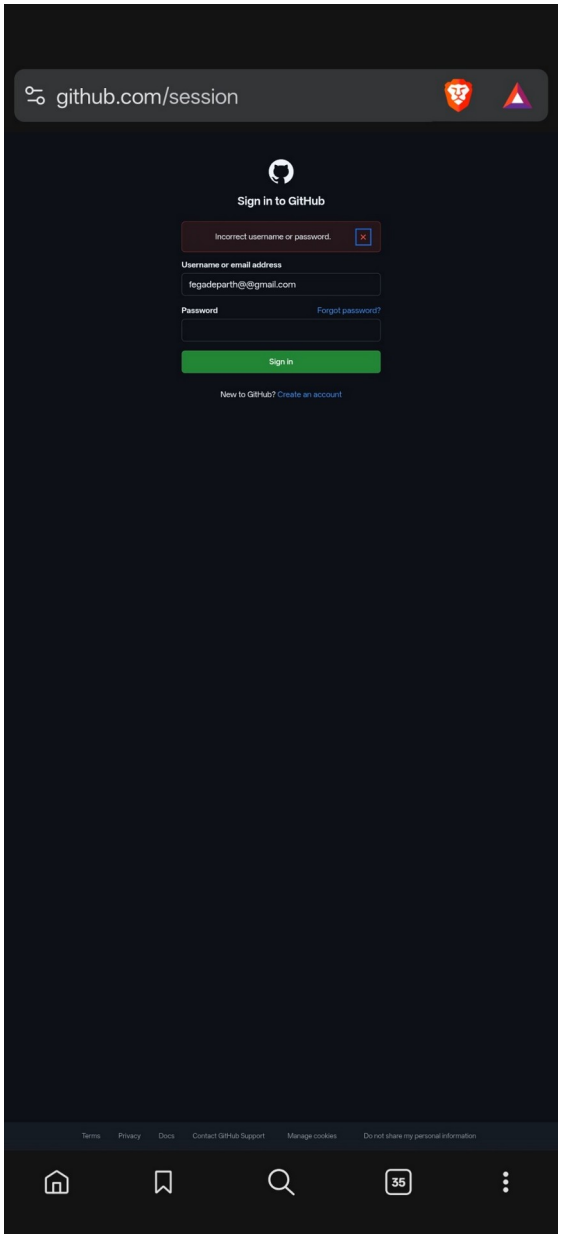

Test Input: Invalid credentials

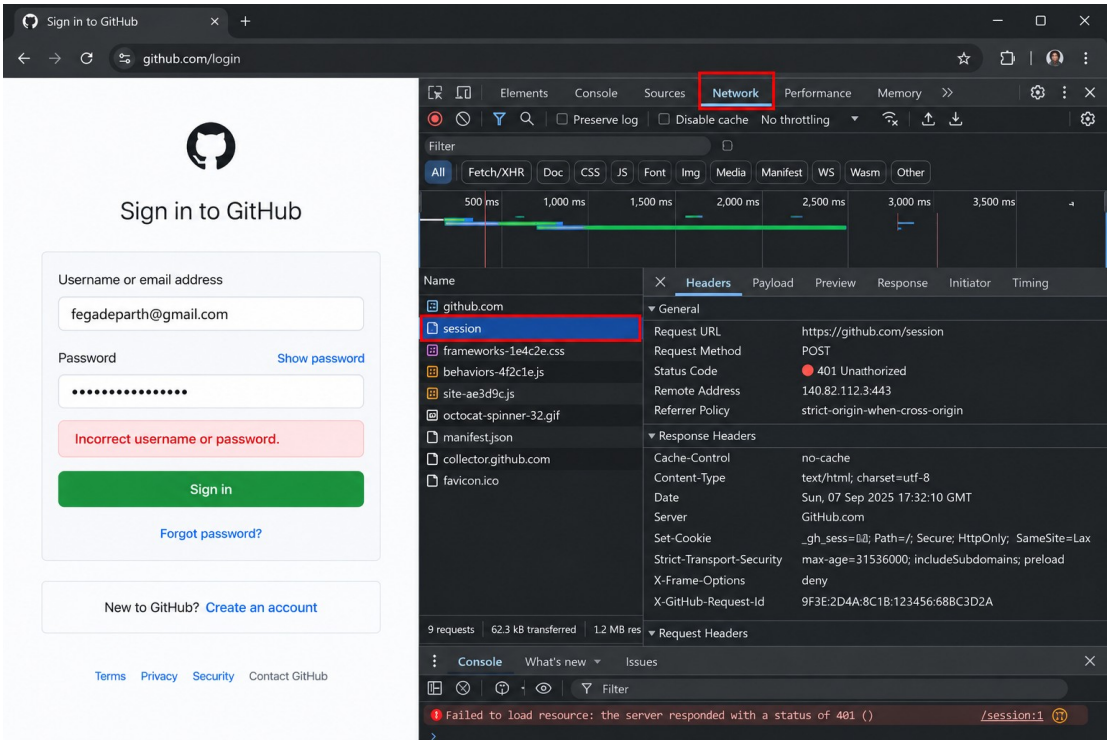

Expected Results: A clear authentication error should be displayed and access denied.

Actual Results: “Incorrect username or password.” is displayed.

Status: Pass

Comments: Screenshot 4; Network tab shows POST /session with 401 Unauthorized.

Failed to load resource: the server responded with a status of 401 ()
/session:1

• Scenario ID: TC-03

Scenario: EP – Empty Login Fields

Test Steps:

1. Open login page.
2. Leave username/email blank.
3. Leave password blank.
4. Click Sign in.

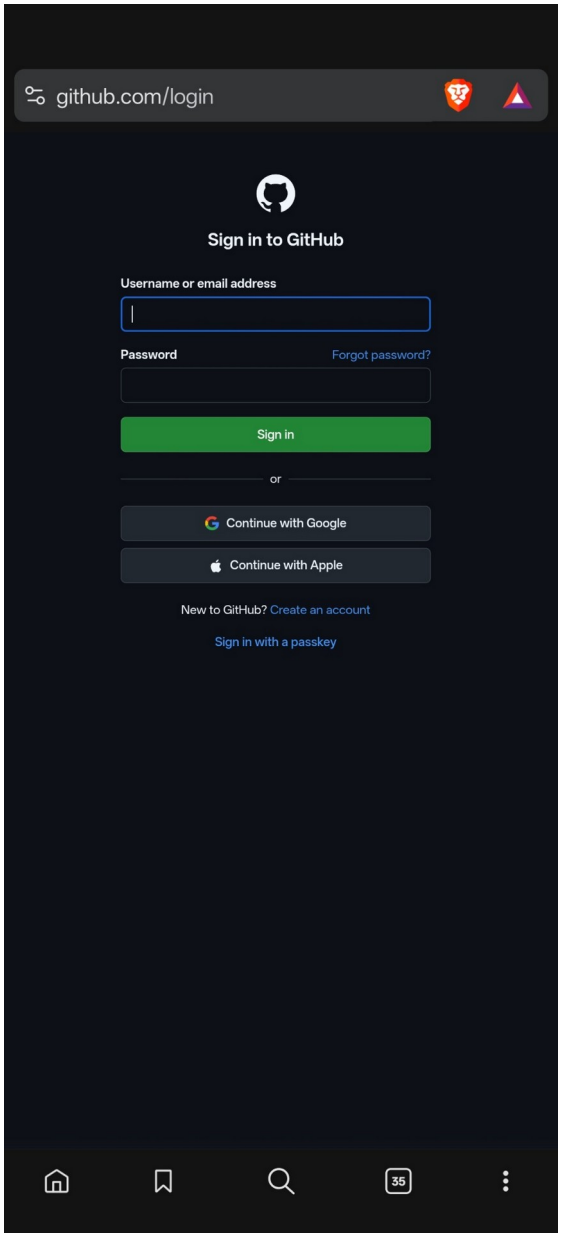

Test Input: Blank username/email + blank password

Expected Results: Required-field validation should prevent submission.

Actual Results: Blank login form is shown, but an empty-submit validation result is not supplied.

Status: Not Executed

Comments: Empty/required-field partition identified.

• Scenario ID: TC-04

Scenario: BVA – Password Length 7

Test Steps:

1. Open password-setting form.
2. Enter a 7-character password.
3. Enter matching confirmation.
4. Submit.

Test Input: 7 characters

Expected Results: Password should be rejected below the stated 8-character lower boundary.

Actual Results: Not visibly executed in the supplied screenshots.

Status: Not Executed

Comments: BVA just below the 8-character threshold.

• Scenario ID: TC-05

Scenario: BVA – Password Length 8

Test Steps:

1. Open password-setting form.
2. Enter an 8-character password containing a number and lowercase letter.
3. Confirm it.
4. Submit.

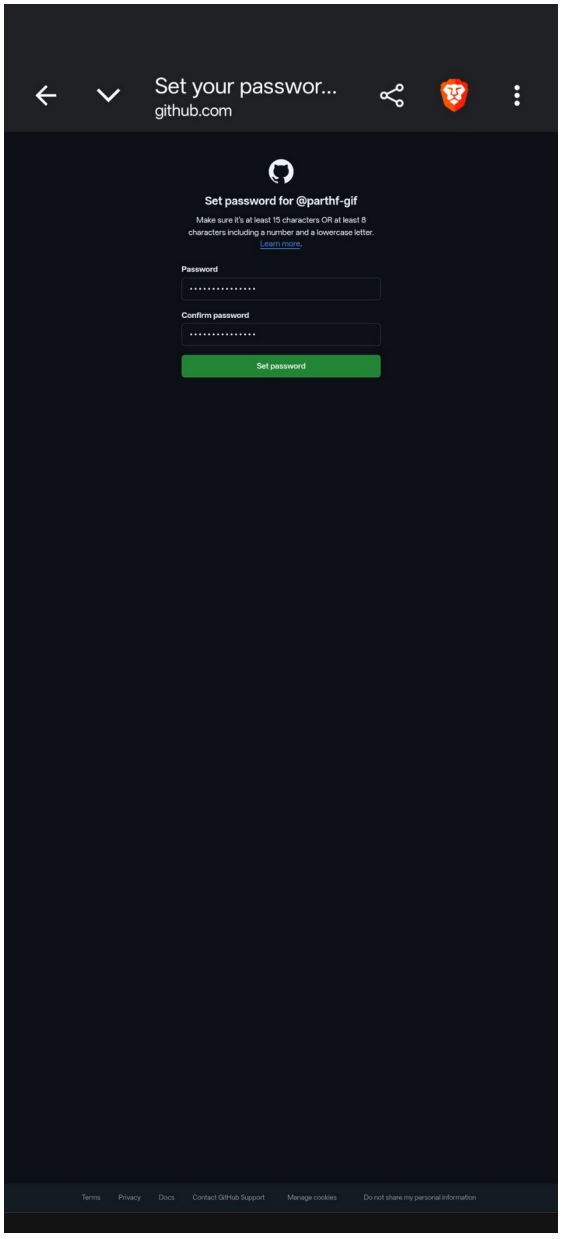

Test Input: 8 characters + number + lowercase

Expected Results: Password should satisfy the shorter stated rule if all other requirements are met.

Actual Results: The form visibly states: at least 15 characters OR at least 8 characters including a number and lowercase letter.

Status: Not Executed

Comments: BVA at the lower valid boundary; evidence is Screenshot 7.

• Scenario ID: TC-06

Scenario: BVA – Password Length 15

Test Steps:

1. Open password-setting form.
2. Enter a compliant 15-character password.
3. Confirm it.
4. Submit.

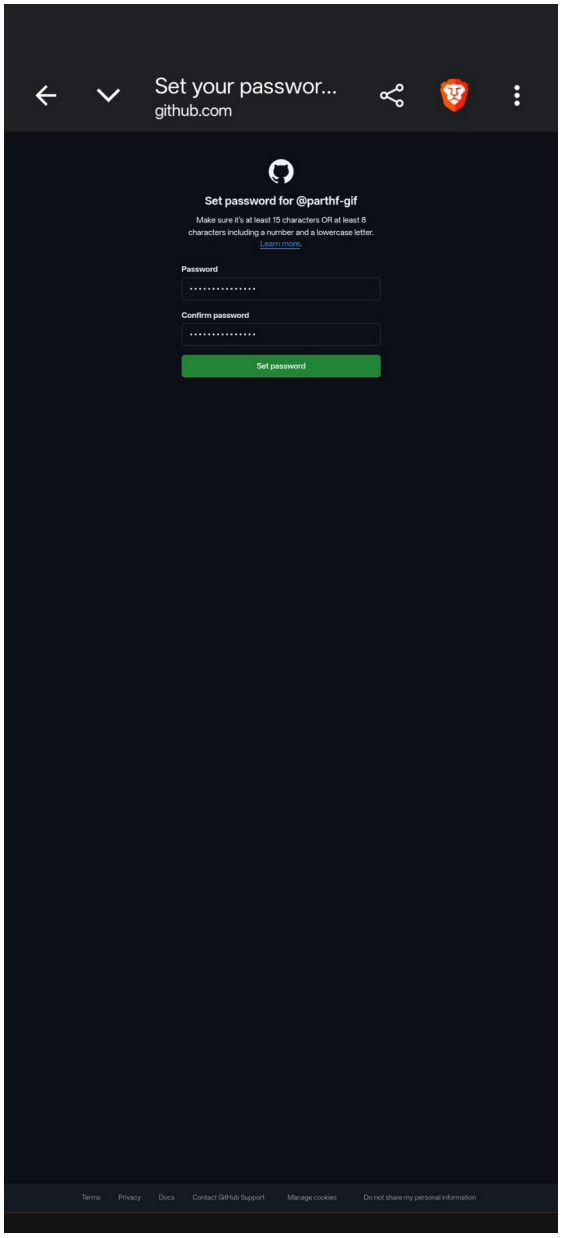

Test Input: 15 characters

Expected Results: Password should be accepted at the 15-character threshold when compliant.

Actual Results: The stated 15-character threshold is visible, but an isolated 15-character execution is not supplied.

Status: Not Executed

Comments: BVA at the second stated length threshold.

• Scenario ID: TC-07

Scenario: EP – Password Confirmation Match

Test Steps:

1. Enter a new password.
2. Enter the same value in Confirm password.
3. Click Set password.

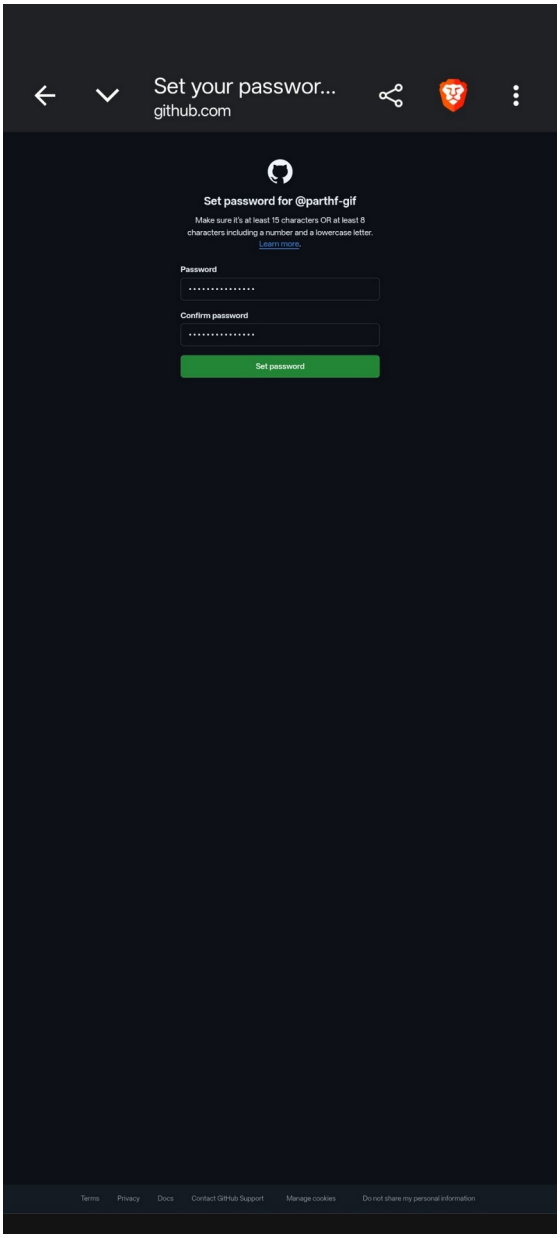

Test Input: Matching password and confirmation

Expected Results: The two values should match and submission should be allowed.

Actual Results: Both password fields are populated and the Set password button is available.

Status: Pass

Comments: Screenshot 7; characters are masked.

• Scenario ID: TC-08

Scenario: EP – Password Reset Invalid Email

Test Steps:

1. Open Forgot password.
2. Enter an email not associated with an eligible account.
3. Submit.

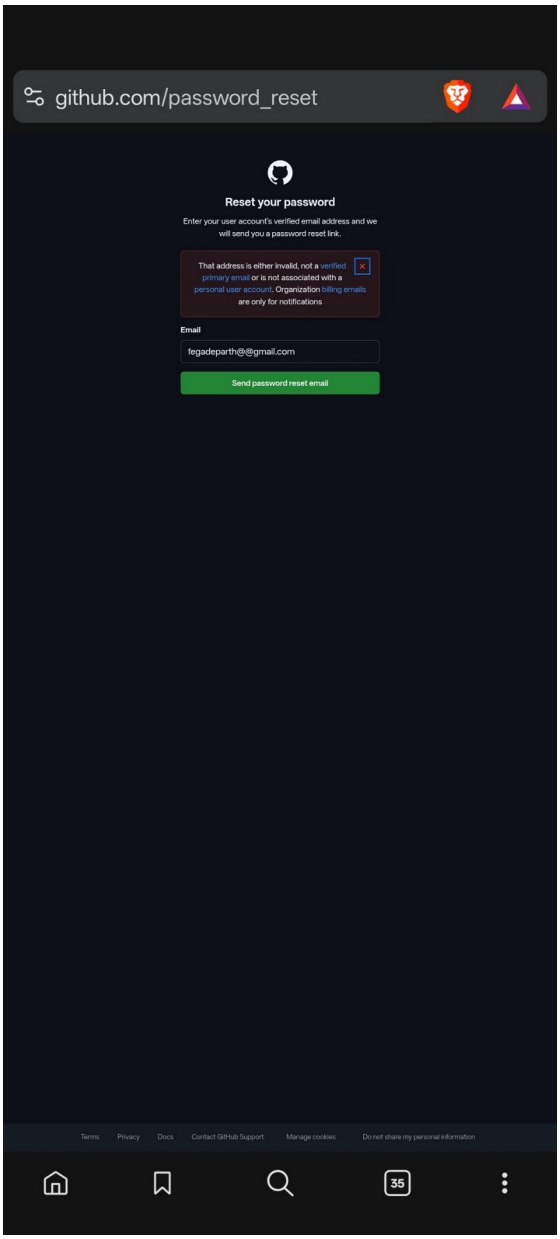

Test Input: Unverified/non-associated email

Expected Results: A clear error should explain that the address is invalid/not verified/not associated with a personal account.

Actual Results: GitHub displays an error stating that the address is invalid/not a verified primary email or is not associated with a personal user account.

Status: Pass

Comments: Screenshot 9.

• Scenario ID: TC-09

Scenario: EP – Password Reset Page

Test Steps:

1. Click Forgot password.
2. Observe the reset form.
3. Enter an email address.

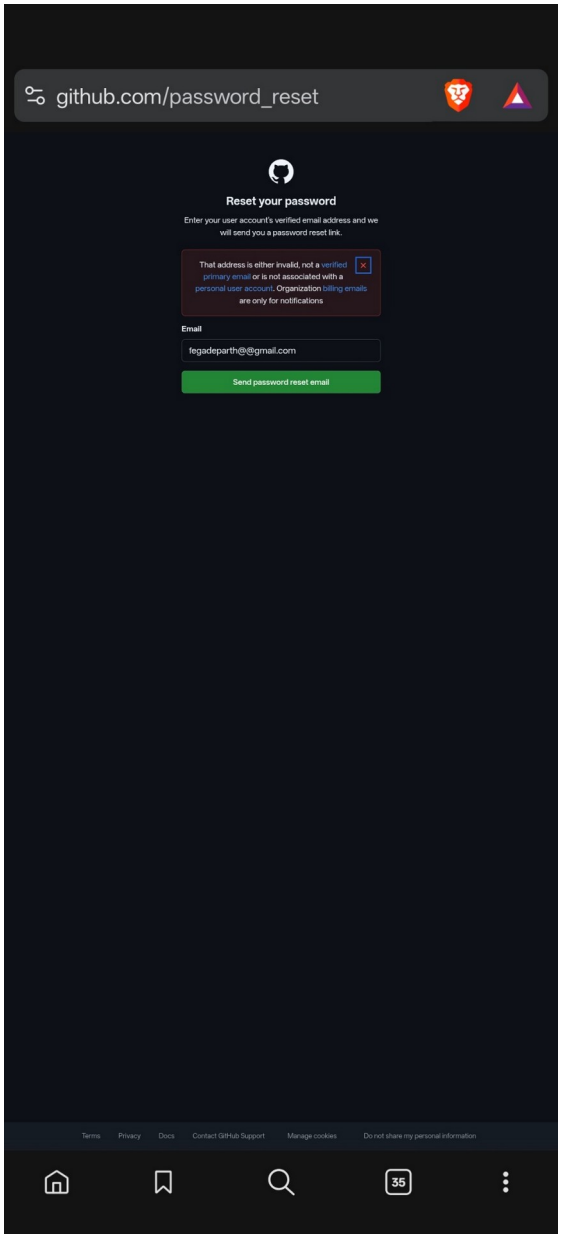

Test Input: Email address

Expected Results: Reset form should display an email input and a password-reset submission control.

Actual Results: Reset your password page is displayed with an Email field and Send password reset email button.

Status: Pass

Comments: Screenshot 6.

• Scenario ID: TC-10

Scenario: EP – Successful Password Reset

Test Steps:

1. Use the password-reset flow.
2. Enter a compliant new password and confirmation.
3. Submit.

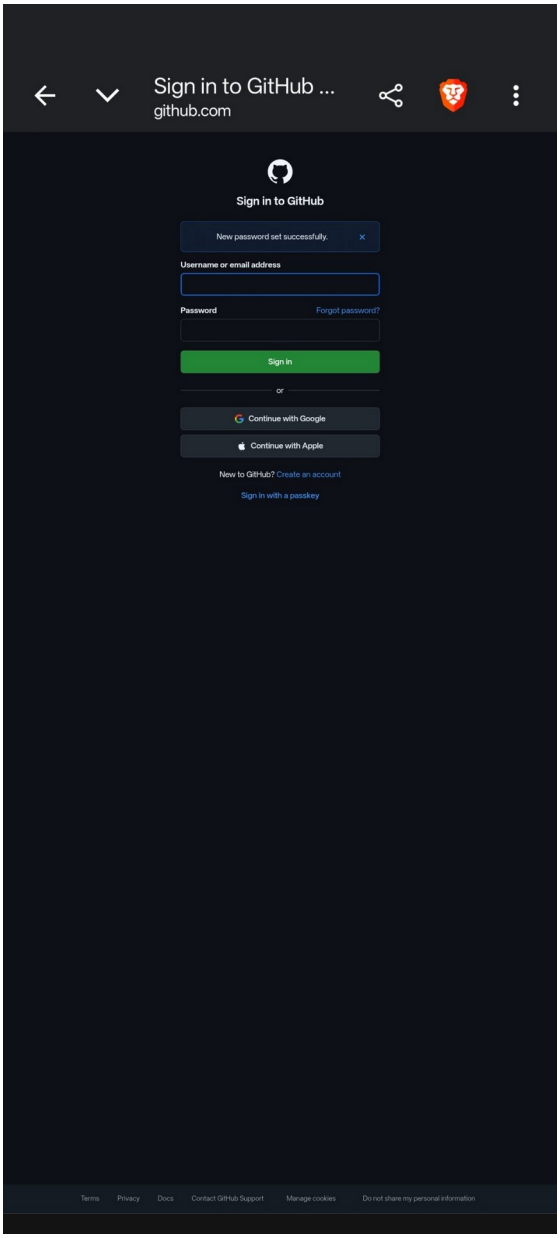

Test Input: Compliant new password

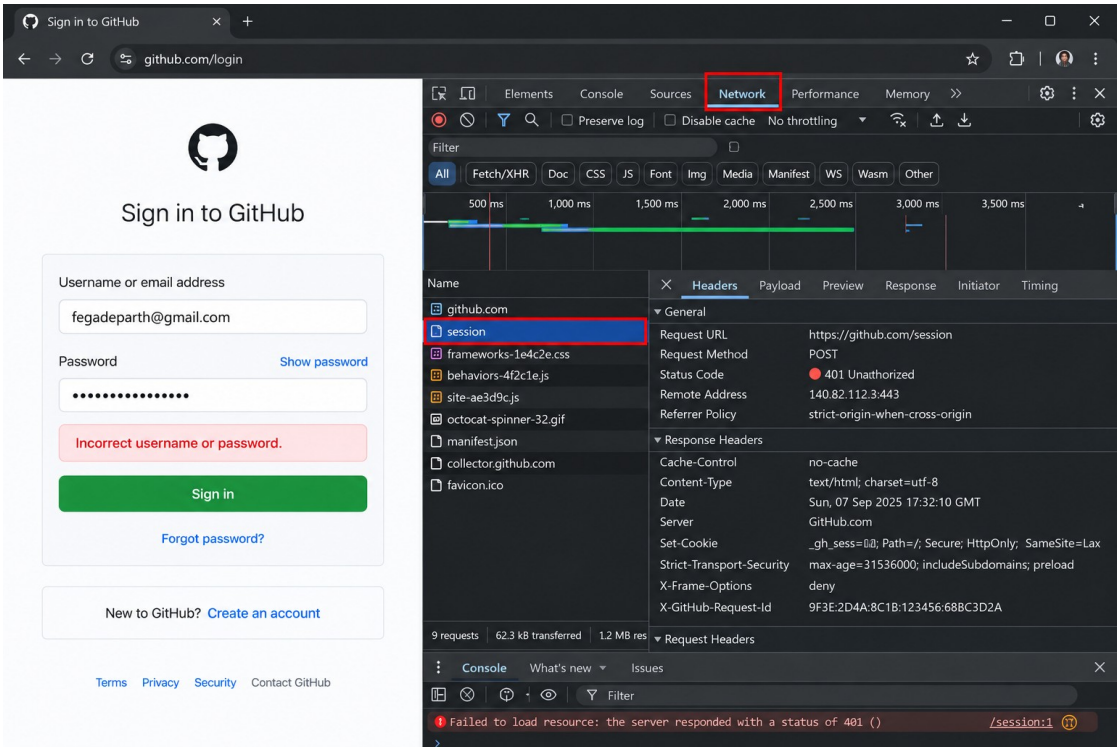

Expected Results: System should save the new password and return the user to a usable sign-in state.

Actual Results: “New password set successfully.” is displayed on the sign-in page.

Status: Pass

Comments: Screenshot 8.

• Summary Of Test Results:

Total Test Cases- 10

Passed- 5

Failed- 0

Not Executed- 5

• Conclusion and Recommendations:

The supplied GitHub test matrix contains 10 test cases. Five are marked Pass and five are marked Not Executed. The supplied evidence documents successful invalid-login handling, password confirmation, invalid-email handling, the password-reset page, and successful password reset. The remaining cases require execution to establish their actual result.

• Issues Found

No test case is marked Failed in the supplied matrix. Cases marked Not Executed should not be treated as passed.

• Recommendations

1. Complete the five Not Executed cases so their actual results can be recorded.
2. Continue using BVA and EP for boundary and invalid-input coverage.
3. Retain screenshot and network evidence for executed authentication cases.

• Bug Reports:

Field	Description
Bug ID	-
Title	No failed test case reported in supplied execution matrix
Module	GitHub Login & Password Reset
Severity	-
Status	N/A – No failed case reported
