**Automation Exercise - Functional Test Report**

**Module Name:** Automation Exercise - Website Functional Test Cases
**Test Case ID:** TC-002
**Tester Name:** Fegade Parth
**Test Case Description:** To validate the functionality of login, signup, product browsing, cart, checkout, and contact us workflows on the Automation Exercise website.
**Prerequisites:** 1. Stable internet connection 2. Browsers for cross browser testing 3. Valid URL for the Automation Exercise website 4. Test user credentials
**Environment Information:** Webpage URL: https://automationexercise.com/

**Scenario ID: TC-001**
**Scenario:** Login Module
**Test Steps:** Verify successful login with valid credentials
**Test Input:** Email: testuser@example.com Password: Test@1234
**Expected Results:** User should be logged in successfully and redirected to Home page. 'Logged in as username' should be displayed.
**Actual Results:** User logged in successfully. 'Logged in as Test User' message appeared on top navigation.
**Status: Pass**
**Comments:** Login works as expected. Good feedback message. Consider adding 'Remember Me' option for better UX.

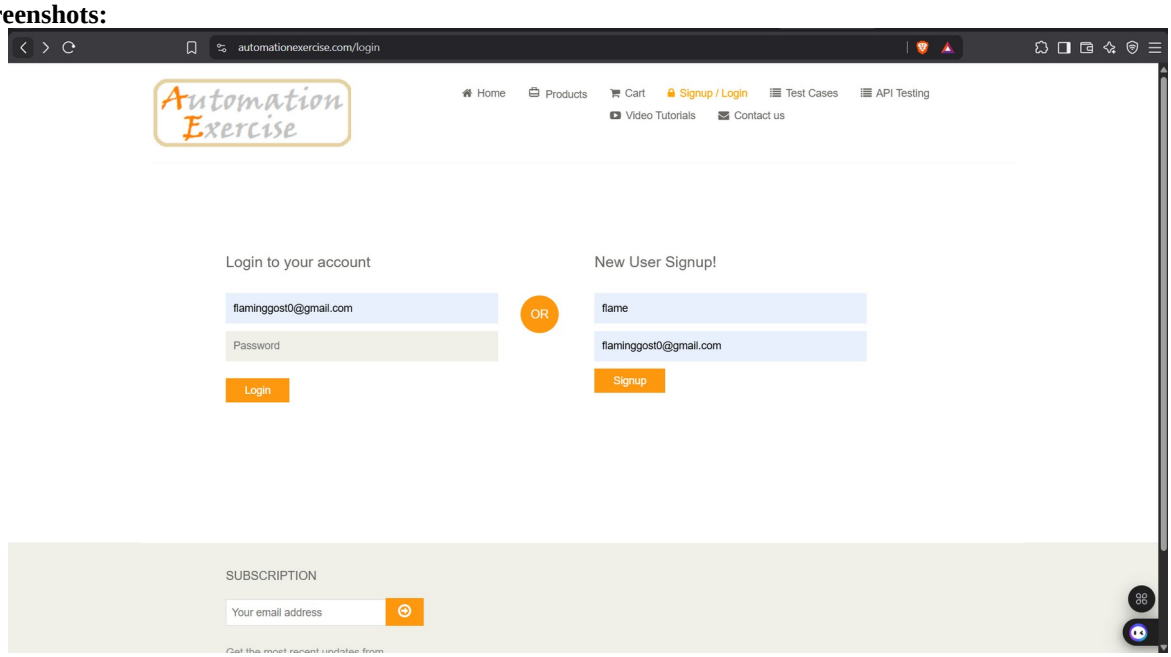

**Scenario ID: TC-002**
**Scenario:** Login Module
**Test Steps:** Verify login with invalid password
**Test Input:** Email: testuser@example.com Password: WrongPass123
**Expected Results:** Error message 'Your email or password is incorrect!' should be displayed. User should remain on login page.
**Actual Results:** Error message displayed correctly: 'Your email or password is incorrect!'. Stayed on login page.
**Status: Pass**
**Comments:** Error handling is clear and user-friendly. Good practice.

**Scenario ID: TC-003**
**Scenario:** Login Module

**Test Steps:** Verify login with empty email and password fields
**Test Input:** Email: (blank) Password: (blank)
**Expected Results:** Validation message should appear asking to fill required fields. Form should not submit.
**Actual Results:** Browser default validation appeared (Please fill out this field). Form did not submit.
**Status: Pass**
**Comments:** Uses HTML5 validation. Suggestion: Add custom red error messages for better consistency with site design.

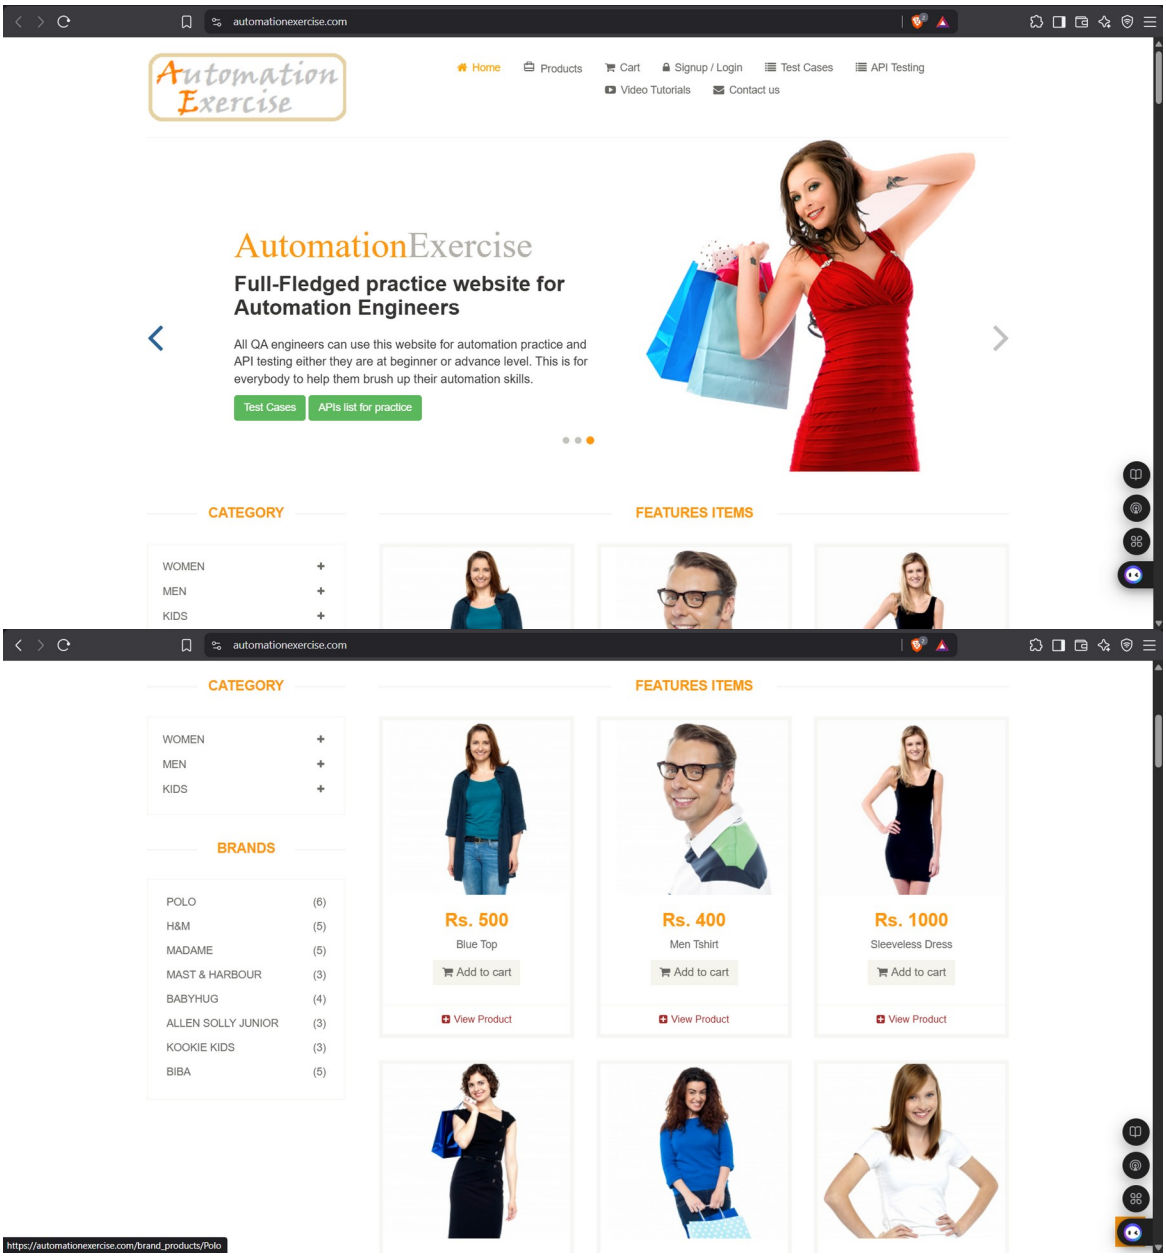

**Scenario ID: TC-004**
**Scenario:** Signup Module
**Test Steps:** Verify new user registration with valid data
**Test Input:** Name: John Doe Email: johndoe2026@test.com Password: Secure@123 Other details filled correctly
**Expected Results:** Account should be created successfully. User should be redirected to Account Created page with confirmation message.
**Actual Results:** Account created successfully. 'ACCOUNT CREATED!' message shown with Continue button.
**Status: Pass**
**Comments:** Registration flow is smooth. Suggestion: Add password strength indicator for better security awareness.
**Screenshots:**

**Scenario ID: TC-005**
**Scenario:** Signup Module
**Test Steps:** Verify registration with already existing email
**Test Input:** Name: Test User Email: testuser@example.com (already registered)
**Expected Results:** Error message 'Email Address already exist!' should be displayed.
**Actual Results:** Error message 'Email Address already exist!' appeared correctly.
**Status: Pass**
**Comments:** Proper duplicate email check is implemented. Good.

**Scenario ID: TC-006**
**Scenario:** Products Module
**Test Steps:** Verify product listing page loads correctly
**Test Input:** Navigate to Products page from menu
**Expected Results:** All products should be displayed with name, price, and 'Add to cart' button. Page should load without errors.
**Actual Results:** Products page loaded successfully. Multiple products visible with prices and Add to cart buttons.
**Status: Pass**
**Comments:** Page loads fast. Product cards are well designed. Suggestion: Add sorting by price/popularity.
**Screenshots:**

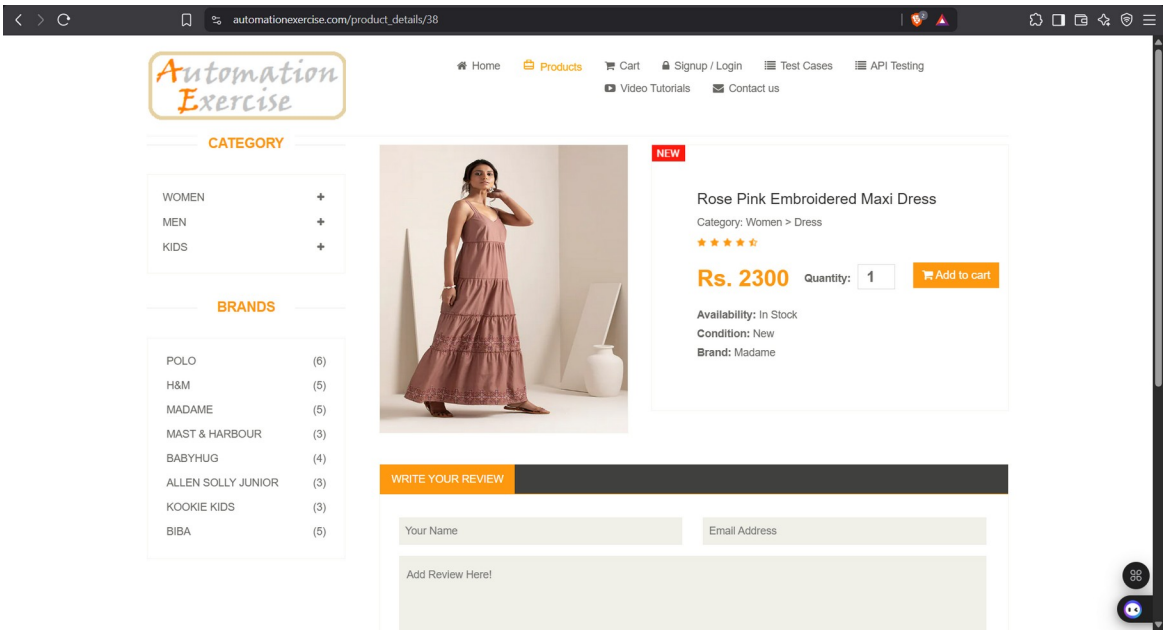

**Scenario ID: TC-007**
**Scenario:** Products Module
**Test Steps:** Verify search functionality with valid product name
**Test Input:** Search keyword: 'Blue Top'
**Expected Results:** Relevant products matching 'Blue Top' should be displayed in search results.
**Actual Results:** Search results showed 'Blue Top' product correctly.
**Status: Pass**
**Comments:** Search works accurately. Suggestion: Add autocomplete/suggestions while typing.

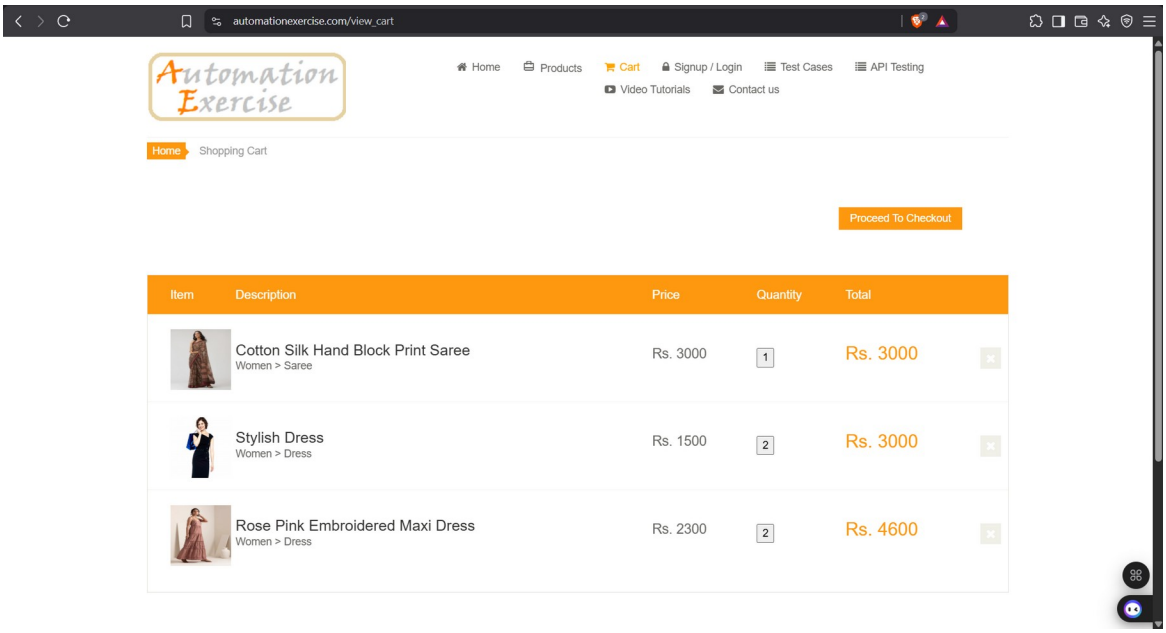

**Scenario ID: TC-008**
**Scenario:** Products Module
**Test Steps:** Verify search with invalid/non-existing product
**Test Input:** Search keyword: 'xyzabc123'
**Expected Results:** Message 'No products found' or empty results should be shown.

**Actual Results:** No products displayed. Empty state handled.
**Status: Pass**
**Comments:** Empty state is handled but could show a clearer 'No products found matching your search' message.

**Scenario ID: TC-009**
**Scenario:** Cart Module
**Test Steps:** Verify adding a product to cart
**Test Input:** Click 'Add to cart' on any product from Products page
**Expected Results:** Product should be added to cart. Cart count should increase. Success message 'Added!' should appear.
**Actual Results:** Product added successfully. Cart icon updated. 'Added!' popup appeared.
**Status: Pass**
**Comments:** Add to cart feedback is immediate and clear. Excellent UX.
**Screenshots:**

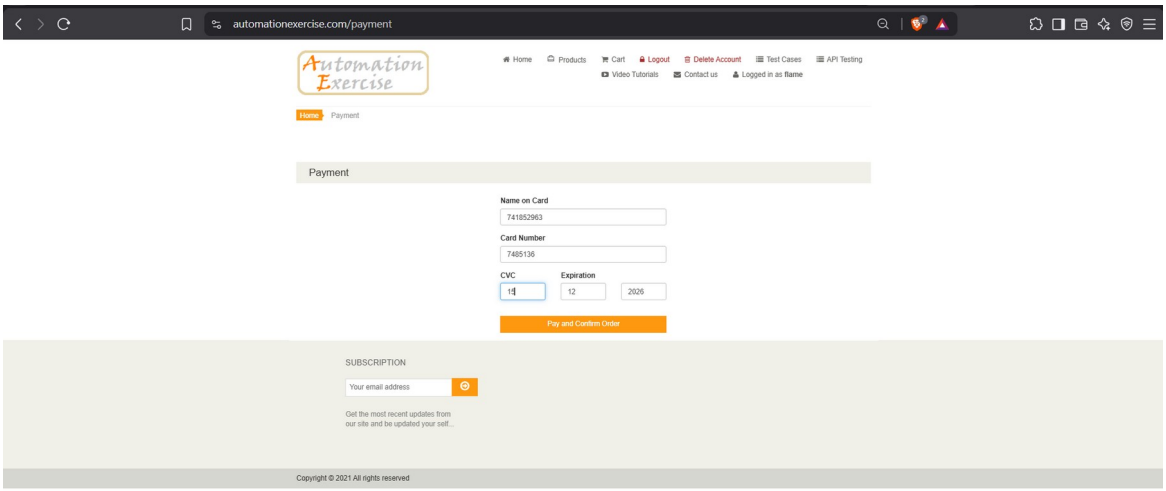

**Scenario ID: TC-010**
**Scenario:** Cart Module
**Test Steps:** Verify cart page displays correct product details
**Test Input:** Navigate to Cart after adding product
**Expected Results:** Cart should show product name, price, quantity, total price correctly.
**Actual Results:** Cart page displayed correct product name, price, quantity=1 and total amount.
**Status: Pass**
**Comments:** Cart calculation is accurate. Suggestion: Allow quantity update directly from cart with +/- buttons more prominently.
**Screenshots:**

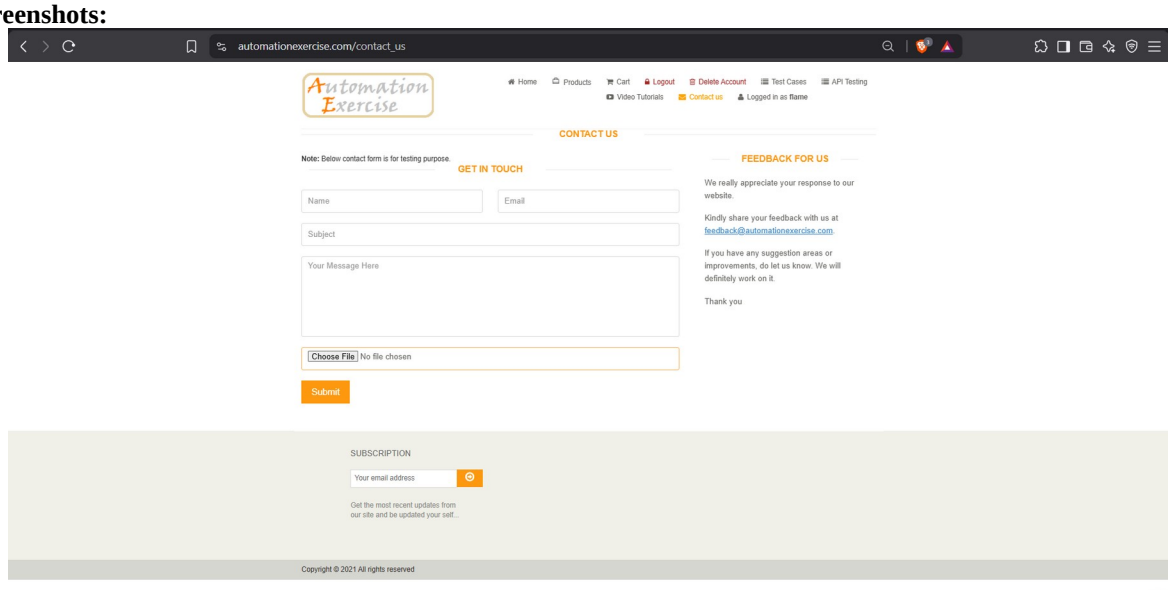

**Scenario ID: TC-011**
**Scenario:** Cart Module
**Test Steps:** Verify removing product from cart
**Test Input:** Click 'X' / Remove on a product in cart
**Expected Results:** Product should be removed from cart. Cart total should update. Empty cart message if no items left.
**Actual Results:** Product removed successfully. Cart became empty with appropriate message.
**Status: Pass**
**Comments:** Remove functionality works well.

**Scenario ID: TC-012**
**Scenario:** Checkout Module
**Test Steps:** Verify proceeding to checkout with items in cart
**Test Input:** Click 'Proceed To Checkout' from Cart page
**Expected Results:** User should be taken to Checkout page showing address details and order review.
**Actual Results:** Redirected to Checkout page. Address and order summary displayed correctly.
**Status: Pass**
**Comments:** Checkout flow is logical. Good separation of review and payment.

**Scenario ID: TC-013**
**Scenario:** Checkout Module
**Test Steps:** Verify placing order with valid payment details
**Test Input:** Fill payment details (Name on Card, Card Number, CVC, Expiry) and click 'Pay and Confirm Order'
**Expected Results:** Order should be placed successfully. 'ORDER PLACED!' confirmation message should appear.
**Actual Results:** Order placed successfully. Confirmation page with 'ORDER PLACED!' message displayed.
**Status: Pass**
**Comments:** Payment form is simple. Note: This is a demo site so no real payment is processed. Good for testing.
**Screenshots:**

**Scenario ID: TC-014**
**Scenario:** Contact Us Module
**Test Steps:** Verify Contact Us form submission with valid data
**Test Input:** Name: Tester Email: tester@test.com Subject: Query Message: Testing contact form Upload file (optional)
**Expected Results:** Success message 'Success! Your details have been submitted successfully.' should appear.
**Actual Results:** Success message displayed correctly after submission.
**Status: Pass**
**Comments:** Contact form works. File upload also accepted. Suggestion: Add character limit indicator for message field.
**Screenshots:**

**Scenario ID: TC-015**
**Scenario:** Navigation

**Test Steps:** Verify Logout functionality
**Test Input:** Click Logout from top navigation after login
**Expected Results:** User should be logged out and redirected to login page. Session should end.
**Actual Results:** Logged out successfully. Redirected to login page. Session cleared.
**Status: Pass**
**Comments:** Logout works correctly. Clean session handling.
